SPE - Automotive Electronic Workshop Tool

NEW - Comprehensive Diagnostic Tool

Workshop Management of Vehicle's Electronics

Electronics has been present in the workshop for more than twenty years and electronic diagnosis has become the essential tool for the repairer. We have gone from the simple injection control unit at the beginning of the 90's, to having more than 50 control units installed on the same vehicle.

A "superficial" tool capable of merely reading/deleting errors or reading a few parameters of the Engine Control Unit is not enough. Now it is a must to have a tool capable of performing thorough diagnosis on every electronic central unit of the vehicle, reading many parameters, enabling the parts to be checked and coding the parts.

Moreover, an efficient "road test" system is equally a must, when it is not possible to troubleshoot an error on a still vehicle, since it is necessary to record data when the vehicle is running on the road. The test equipment for electronics must be efficiently integrated with the electric signal measuring module.
